

HB 315 -- Prescription Eye Drop Refills

Sponsor: Rowland

Beginning on January 1, 2014, this bill requires a health carrier that offers or issues plans that provide coverage for prescription eye drops to provide coverage for refilling the eye drop prescription prior to the last day of the insured's dosage period as long as the prescribing health care provider authorizes the early refill. Coverage must not be subject to any greater deductible or co-payment than other similar health care services provided by the health plan. The bill exempts specified supplemental insurance policies from these provisions.
