

HB 1795 -- NET METERING

SPONSOR: Berry

This bill changes the laws regarding the Net Metering and Easy Connection Act. The bill allows a customer-generator to use a system with a capacity of not more than one megawatt and allows them to receive up to 100% of their own energy use in compensation for providing energy to the electrical system of a utility.

The net metering program is defined as a demand side program to allow utilities to recover costs associated with the program.
