

HB 914 -- Hearing Instrument Purchase Agreements

Sponsor: Grisamore

This bill requires a licensed audiologist or a person fitting a hearing instrument to provide a customer with a purchase agreement verifying that he or she has been informed about audio switch technology, including benefits as increased access to telephones and assistive listening devices. If the hearing device purchased has this technology, the customer must be instructed in the proper use of the technology and must be informed about the Missouri Telecommunications Equipment Distribution Program which provides assistive telecommunications devices to Missourians who have a hearing loss.
