

COMMITTEE OF ORIGIN: Standing Committee on Elections

This bill allows each challenger and watcher designated by the county committee chair of each political party named on the ballot to be present until all closing certification forms are completed, all equipment is closed and taken down, the transportation case for the ballots is sealed, election materials are returned to the election authority or to the designated collection place for a polling place, and any other duties or procedures required under Sections 115.447 to 115.491, RSMo, are completed. A challenger and watcher may stay at each location where absentee ballots are being prepared for counting and remain until the absentee ballots are counted.

The bill changes the laws regarding voter registration and petition signature requirements. In its main provisions, the bill:

- (1) Authorizes an election authority to accept voter registration applications using electronic methods that only apply to transactions between parties that have agreed to conduct transactions by electronic means;
- (2) Authorizes a local election authority to develop, maintain, and approve systems that transmit voter registration applications electronically. An officer, agency, or organization cannot collect or submit a voter registration application with an electronic signature to an election authority without first obtaining approval of the data and signature format from the local election authority and the approval of the voter to collect and store the signature and data;
- (3) Requires a local election authority that maintains a voter registration application system to direct voter registration applicants from other jurisdictions to the system used by the local election authority for that jurisdiction to accept voter registration applications electronically;
- (4) Requires a system maintained by the Office of the Secretary of State to be used to accept voter registration applications electronically subsequent to approval from the committee that is to be formed. Within 30 days of the effective date of these provisions, the president of the Missouri Association of County Clerks and Election Authorities must appoint 14 of its members to serve on a committee to approve and develop uniform standards, systems, and modifications that must be used by the Secretary of State in any electronic voter registration application system offered by that office. The committee must have 14 local election

authorities, including representatives of each classification of counties, a representative from an election board, and at least one member who has experience processing on-line voter registration transactions. In addition, one representative appointed by the Office of the Secretary of State must serve on the committee. The committee must immediately meet to approve electronic signature formats and a minimum set of data collection standards for use in a voter registration application system maintained by the Secretary of State. Once the format and data collection standards are approved by the committee and implemented for the system maintained by the Secretary of State, local election authorities must accept the transmission of voter registration applications submitted to the approved system. The Office of the Secretary of State must direct eligible voters to a local election authority's system to accept voter registration applications electronically if the local election authority has a system in place as of the effective date of these provisions or implements a system that meets the same standards and format that has been approved by the committee for the Secretary of State's system;

(5) Requires the committee to meet not less than semi-annually through June 30, 2017, to recommend and approve changes and enhancements proposed by the Secretary of State or election authorities to the electronic voter registration application system. Vacancies that occur on the committee must be filled by the president of the Missouri Association of County Clerks and Election Authorities at the time of the vacancy;

(6) Requires, as soon as practical, the system maintained by the Secretary of State to provide a method where the data entered by the voter registration applicant does not have to be re-entered by the election authority to the state voter registration database;

(7) Specifies that each applicant who registers using an approved electronic voter registration application system must be deemed to be registered as of the date the signed application is submitted to the system if the application is accepted and not rejected by the election authority and the verification notice required under Section 115.155, RSMo, is not returned as undeliverable by the postal service;

(8) Specifies that these provisions cannot apply to voter registration and absentee records submitted by voters authorized under federal law, Section 115.291, or Sections 115.900 to 115.940, to submit electronic records and signatures;

(9) Requires any signature required for petition submission under Chapter 116 to be handwritten on a paper document. High quality copies, including electronic copies, of signatures made on paper

documents may be used for petition signature verification purposes and retained as records; and

(10) Stipulates that an election authority that agrees to conduct a transaction by electronic means may refuse to conduct other transactions by electronic means. An election authority or the Secretary of State cannot furnish to any member of the public any data collected under a voter registration application system except as authorized by law. These provisions cannot be construed to require the Secretary of State to cease operating a voter registration application in place as of the effective date of the bill.
