

HB 1108 -- ELECTRONIC VOTER VERIFICATION SYSTEMS

SPONSOR: Moon

This bill requires each election authority to use an electronic device that allows it to capture a digital image or photograph of each voter casting a vote. The device must allow the authority to enter the voter's identifying information and to associate each voter's image or photograph with the voter's identifying information including the voter's signature. Any device must also be compatible with any electronic voter identification system used by the authority. All fees and costs for purchasing and using the equipment necessary to implement the provisions of the bill must be compensated by the Secretary of State from funds appropriated by the General Assembly for that purpose.
